

# ARIA Cloud

**ARIA Cloud**, a fully managed Cloud solution for RPA and Intelligent Automation(IA).

## BENEFITS AT A GLANCE

### Always up to date

You never have to worry about upgrading your RPA software again or any other IA software. Anything on ARIA Cloud is kept up to date at all times.

### Freedom of choice

ARIA Cloud is technology agnostic. Add any IA stack. Try out different solutions. Don't be locked into what one vendor has to offer.

### Pay for what you need

Don't pay for software you don't need. You can add software when you need it, not before.

### ARIA UX

Powerful web-based user experience for COE, IT and business users alike. ARIA is packed with advanced features to speed up automation.

### Choose your size

Providing multiple options allows you to buy in at low cost and scale as your program grows.

### Lower your cost

Our benchmarks show that customers save on average 30% or more when moving to ARIA Cloud.

# Always up to date

---

Upgrading your RPA environment can be a costly and stressful situation. New releases may deprecate code that needs to be replaced and scheduling the right time with your IT department can be challenging. As your automation platform becomes more complex and additional solutions are added (e.g., OCR, AI models, UX apps, etc.), the challenge becomes even more complex.

## **ARIA**Cloud is always on the latest release

---

**ARIA**Cloud updates to new releases continuously at no additional charge. Never worry about having to upgrade your RPA environment again, or your OCR solution, or your Application UX, or... well you get the picture.

## **We plan with you**

---

Upgrades of your RPA, OCR, NLP, UX and other IA solutions are coordinated with your support team, so there are no surprises and upgrades can be managed in line with your development roadmap.

## **Smart upgrades**

---

INVOKE performs pre-upgrades and testing on our **ARIA**Cloud central instance before planning any upgrade. This means we come prepared with a plan and recommendations when it's time to make a change.

# Easy migration

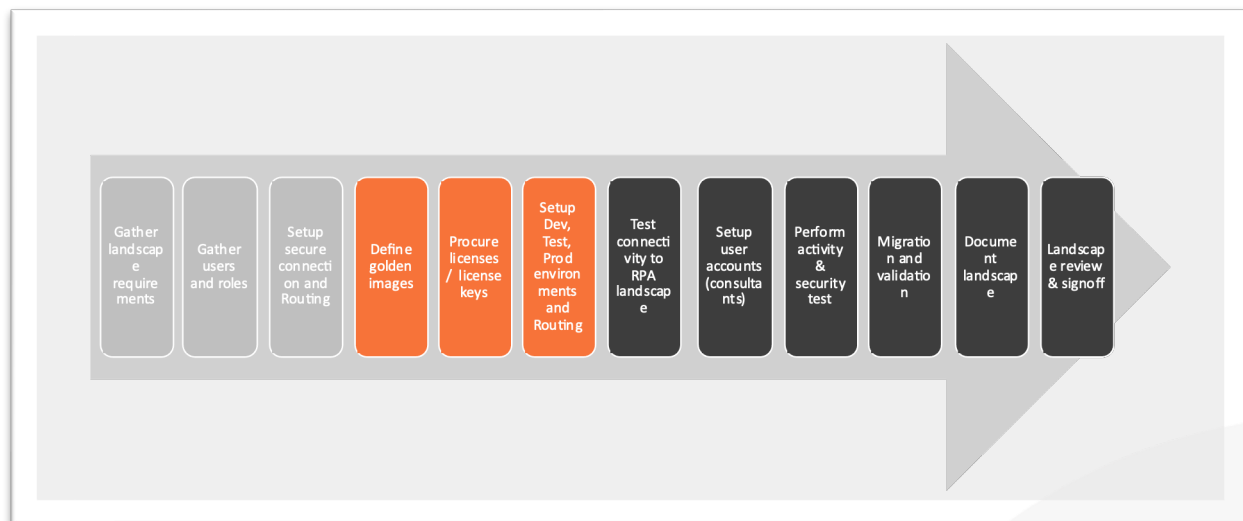

Migrating to a Cloud environment can be a daunting project and take away from vital business critical tasks. INVOKE has made it easy to migrate your existing environment to **ARIA** Cloud

## Discovery

We don't leave anything to chance. INVOKE will analyze your existing infrastructure, systems and automations (live and in backlog) prior to any migration recommendation.

## Migration planning

INVOKE's best-practice migration approach takes into consideration technical and business challenges for an optimal transition approach.

## Proven approach at your speed

Migrate all at once or mitigate operational risk by turning on automations in groups at a time. Our proven approach works at the speed your business can absorb. Throughout the entire process, you are supported by automation specialists and infrastructure architects for a smooth transition with minimal effort.

# Lower your cost

---

**ARIA** Cloud is not just cost effective, its downright inexpensive. On average, we see customers saving 30% when migrating.

## Great value at a low cost

---

By leveraging our investments, you benefit for an inexpensive model that starts at a very affordable price packed with everything needed to run at enterprise scale.

## Save on upgrades

---

Upgrades to RPA and other IA software are free of charge.

## Save on resources

---

**ARIA** Cloud manages your entire environment, including the robot machines. Our powerful control room reduces the need for RPA controller work by 85%.

## Save on software

---

Enjoy preferred license pricing when purchasing your RPA and IA licenses through INVOKE.

**ARIA** Cloud optimizes your license usage, provides burst license capacity and an ability to pay for what you need.

## Save on time

---

With **ARIA** Cloud you can try out many IA solution technologies quickly without the need for upfront license commitments. Validate that you have the right solution before making a purchase commitment in a matter of weeks, not months.

# Freedom of choice

---

**ARIA** Cloud supports many solutions and technologies. You don't need to be locked in with the options one software vendor offers. You can already select from over a dozen IA solutions today and we support hosting and management of additional technologies you select.

## RPA technology

---

Do you have multiple RPA technologies and /or environments in your company? **ARIA** Cloud covers them all. A single Cloud solution and central management console.

## Natural Language Processing

---

**ARIA** Cloud integrates with AWS Comprehend, Krista Soft and Hyperscience out of the box.

## Custom UX applications

---

**ARIA** Cloud comes with a powerful UX builder that turns your automations into full fledged SaaS applications.

## Process & Task mining

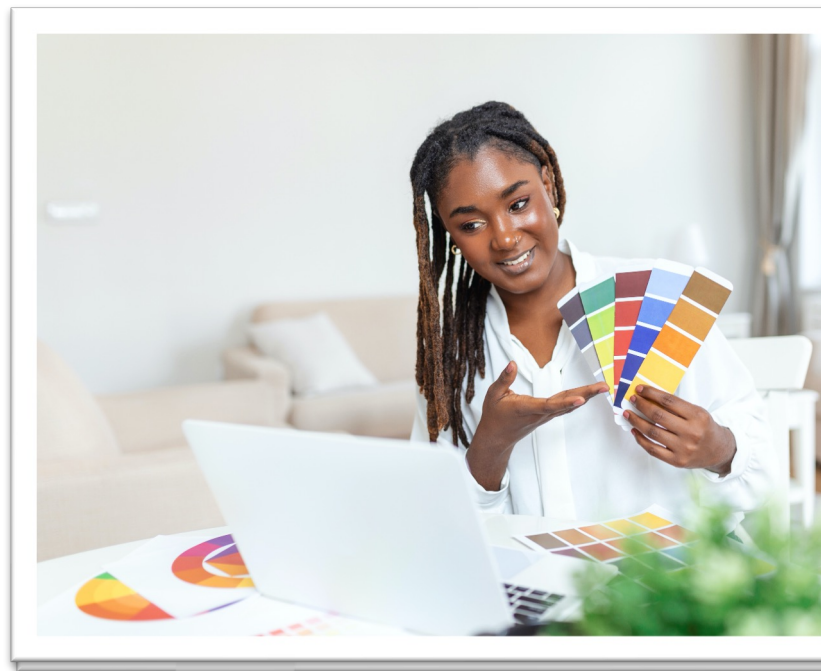

---

**ARIA** Cloud supports INVOKE's own GENIE solution and ABBYY Timeline.

## OCR technology

---

**ARIA** Cloud integrates with solutions like Hyperscience, Decipher, Abbyy and AWS Textract out of the box. These solutions are hosted and managed within the same infrastructure and a powerful UX is provided to allow for a single user experience to manage document-based processes.

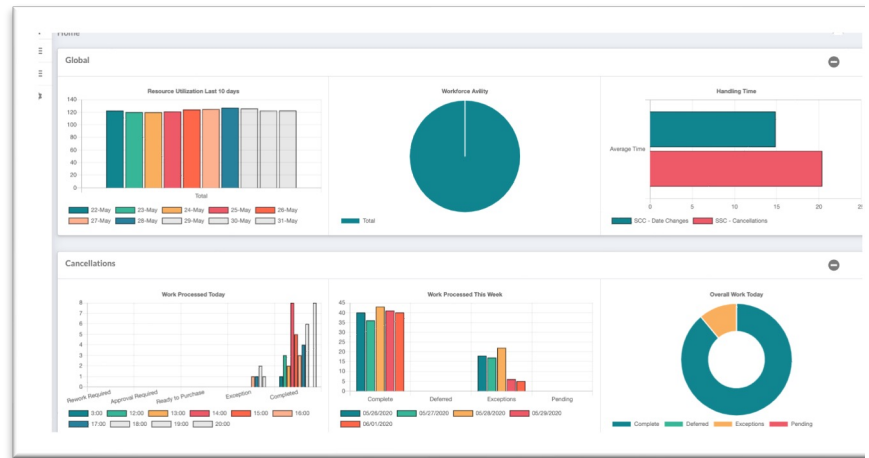

**ARIA Cloud** provides a powerful central web-based user experience to manage all your technologies, optimize scheduling and orchestration and build your own custom applications.

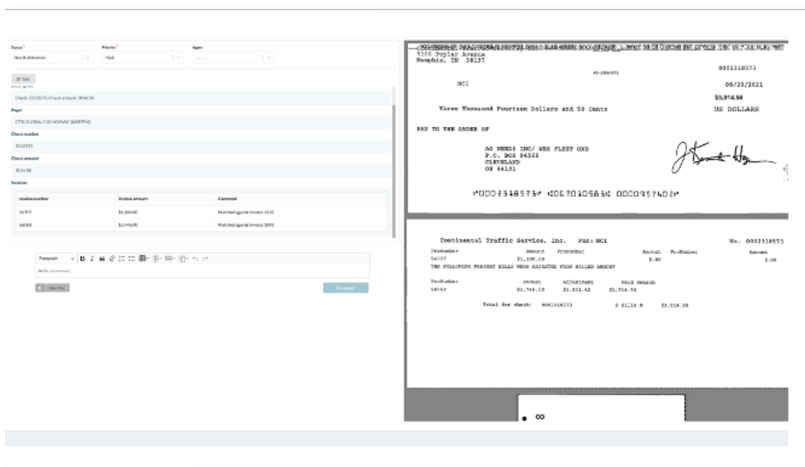

## Reporting

**ARIA Cloud** provides a configurable dashboard where you can monitor system health and utilization. Understanding how your investment is performing becomes as simple as the click of a button.

## Intelligent scheduling and SLA management

**ARIA Cloud** contains a powerful scheduling capability that optimizes your digital workforce and prioritizes execution based on your priorities and service levels. Using ARIA scheduler, you no longer need to interact with the RPA control room. Take control and get automated notifications based on SLA's.

## Custom application deployment

You can deploy automated processes as applications to business users within minutes and create entry forms to capture data when users kick off processes ad-hoc.

## Admin center

Easily manage access and responsibilities through the admin center allowing you to extend ARIA within the organization or customers.

# What's Included

---

## Security

---

Cloud Security at INVOKE is the highest priority when it comes to delivering a solution. We use the world's leading industry standard when it comes to Cloud Architecture as the basis for our design, the Cloud Security Alliance.

Combined with the highly secure AWS data centers, our clients enjoy a dedicated client environment that is secure and scalable with over 43 delivery options around the world as a primary or back up location.

**ARIA Cloud** is PCI certified, HIPAA and GDPR compliant

## Infrastructure

---

**ARIA Cloud** is deployed on AWS. The primary and fail over locations can be selected to accommodate local, business and regulatory requirements.

The supporting resource team are available in multiple regions to ensure continuous business response and compliance.

## Software Licenses

---

- IA Licenses are paid upfront annually. Additional licenses are co-termed.
- OS licenses are added to monthly fees.
- Migrate your existing licenses. No need to break your existing contracts.

## Included in your fixed monthly fee

---

- Hosting
- Hardware provisioning
- Infrastructure upkeep
- Infrastructure support
- Software updates
- Security monitoring
- Customer Service
- IT Experience
- RPA Experience
- PCI compliance

## Add-on services (optional)

---

Implemented as either a monthly fee or Time and Materials.

- Automation monitoring
- Operational support
- Process support
- Process development
- RPA Training / Mentoring
- Line of Business support
